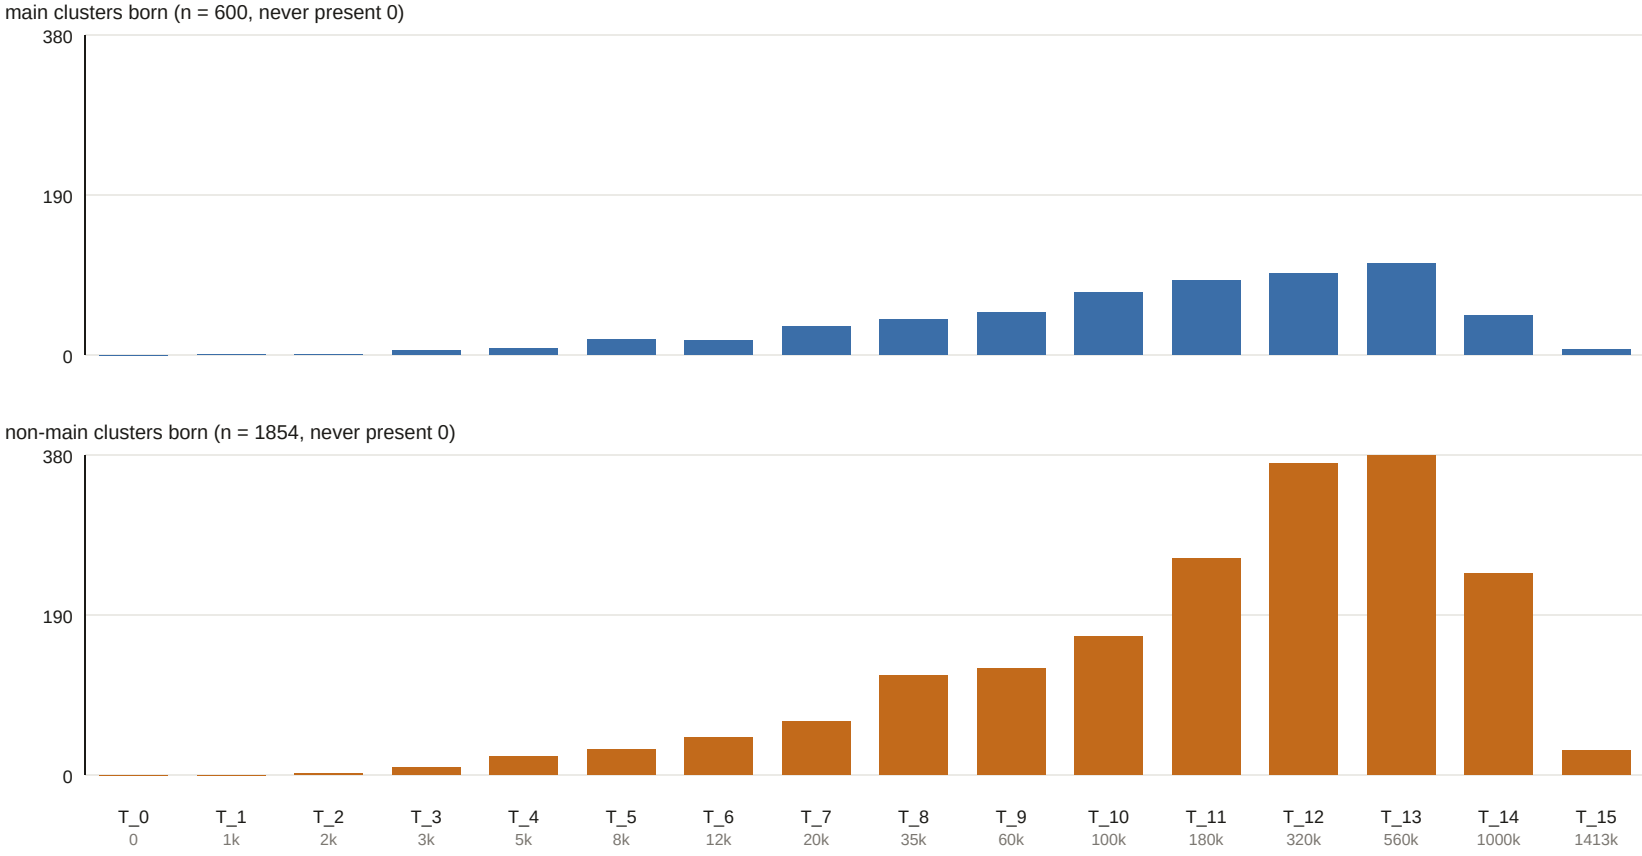
Main clusters are born at median T_11, non-main clusters at median T_12



birth: first grid point where the median exemplar reaches the pole's own q99.9 and stays there (percentile reading); echo clusters left out

null (§6.4 permutation band on b, main oldest): mean 0.414, 97.5th 0.449; observed b = 0.476 [0.436, 0.517] over 574 poles, above the band
